

Drag Files On ALV-Grid		
Eins	Zwei	Drei
Drop	Files	Here

Drop Files in ALV-Grid

Drag Files On ALV-Grid		
Eins	Zwei	Drei
Drop	Files	Here

Seit etwa 2012 ist es möglich, Dateien aus dem Explorer in ein ALV-Grid zu ziehen und die Namen dort zu verarbeiten (SAP Note 1748468). Ob das in deinem SAP-System bereits funktioniert, kannst du daran erkennen, dass die Klasse CL_GUI_ALV_GRID die Methode GET_DROPPED_EXTERNAL_FILES hat.

Das Event DROP_EXTERNAL_FILES muss registriert werden und mit der Methode DRAG_ACCEPT_FILES(1) muss die Funktionalität aktiviert werden.

Es kann das gesamte ALV-Grid-Control als „Ablagefläche“ genutzt werden, also auch dort, wo keine Zeilen vorhanden sind. Werden die Dateien auf einer Zelle abgelegt, dann kann diese Zelle bestimmt werden. In dem Beispielcoding werden die Dateien der Spalte hinzugefügt, auf der sie abgelegt wurden.
